autocompraventaia.es

Last updated 2026-05-15

Locales covered English, Spanish, German

Formalized test cases i18n_test_cases_2026-05-12.md , test_cases_2026-05-15.md

1. Scope 2. Coverage 3. Findings 4. Defects 5. Traceability Index 6. Regression Impact

1. Scope

Mission	QA all workflows on https://autocompraventaia.es/, restricted to English, Spanish, and German locales.
Covered	Home page, locale switching, registration (email/password and Google), login (email/password and Google, including error handling), logout, Offers Dashboard, Below-Market page, Interactive Map, Top Sales, Analytics, Notifications, Favorites, Payments, Terms of Service, footer links, and unauthenticated route protection.
Out of scope	All locale variants other than EN/ES/DE; real payment submission; completing a full Google OAuth consent flow; mobile/tablet viewports; native-speaker linguistic review of translation quality.

2. Coverage

 confirmed working  defect  not tested — click a flow name to jump to its detail below.

FLOW	EN	ES	DE
1. Home / Landing Page			
2. Locale switching			
3. Registration			
4. Registration via Google			
5. Login			

6. Login via Google	✓	✓	✓
7. Login error handling	✓	—	—
8. Logout	✓	—	—
9. Offers Dashboard	✓	—	—
10. Below-Market	✗	—	✗
11. Interactive Map	✓	—	—
12. Top Sales	✓	—	—
13. Analytics	±	—	—
14. Notifications	✓	—	—
15. Favorites	±	—	—
16. Payments	✓	✓	✓
17. Terms of Service	✗	✗	✗
18. Footer links	✓	✓	✓
19. Unauthenticated route protection	✓	✓	✓
20. Favorites-count API (logged out)	✗	✗	✗

1. Home / Landing Page

✓ EN ✓ ES ✗ DE

Fully working in English and Spanish, including the audience cards, profit calculator, and success stories. In German, the navigation, hero section, and call-to-action are translated, but the audience cards, calculator details, and success-story labels remain in Spanish — see [D-03](#).

2. Locale switching

✓ EN ✓ ES ✓ DE

The language switcher and direct `?_locale=` links both load the correct locale consistently across pages.

3. Registration

✓ EN ✗ ES ✗ DE

Account creation succeeds in all three languages. In Spanish and German, the registration form itself (heading, field labels, button, sign-up options) displays in English even though the rest of the page is translated — see [D-02](#).

4. Registration via Google

✓ EN ✓ ES ✓ DE

The "Sign up with Google" link is present on all three locales and correctly routes to the Google connector.

5. Login

✓ EN ✗ ES ✗ DE

Same pattern as Registration — login itself works in all three languages; the form content is English-only on Spanish and German. See [D-02](#).

6. Login via Google

✓ EN ✓ ES ✓ DE

Present and correctly routed on all three locales.

7. Login error handling

✓ EN — ES — DE

Wrong credentials show an inline "Invalid credentials." message; an empty submission is blocked by the browser's native "Please fill out this field." validation. Not separately tested on Spanish/German — same shared form and backend as English.

8. Logout

✓ EN — ES — DE

Clears the session and redirects to the home page; a subsequent attempt to reach an authenticated page correctly redirects to login.

9. Offers Dashboard

✓ EN — ES — DE

Loads with filter controls and a populated listing of 123 cars.

10. Below-Market

✗ EN — ES ✗ DE

Page title, heading, and all labels are in Spanish on both English and German locales — see [D-10](#).

11. Interactive Map

✓ EN — ES — DE

Renders with a large number of geolocated offer markers.

12. Top Sales

✓ EN — ES — DE

Renders a ranked best-sellers list with a heading and methodology note, correctly in English.

13. Analytics

± EN — ES — DE

Page structure (heading, calendar, seven analysis tabs) renders correctly. Separately, the page triggers repeated console resource-load errors — see [D-11](#).

14. Notifications

✓ EN — ES — DE

Channel settings (Telegram, Email) and an empty notification history table render correctly.

15. Favorites

± EN — ES — DE

Eleven cars are pre-seeded for every new account — intentional shared demo data, not a bug. Removing a favorite works and is correctly saved, but the nav badge count doesn't update until the page is reloaded — see [D-13](#).

16. Payments

✓ EN ✓ ES ✓ DE

Plan headings, pricing, and the active-subscription banner are all correctly localized on all three locales. Three separate formatting defects remain on the page — see [D-07](#), [D-09](#), [D-14](#).

17. Terms of Service

✗ EN ✗ ES ✗ DE

Redirects an unauthenticated visitor to the login page on all three locales, whether reached by direct URL or by the link in the public footer. Renders correctly once logged in — see [D-12](#).

18. Footer links

✓ EN ✓ ES ✓ DE

Social and email links are valid on all three locales. The copyright line itself stays in Spanish on English and German — see [D-05](#).

19. Unauthenticated route protection

✓ EN ✓ ES ✓ DE

Every protected route (Offers, Map, Top Sales, Below-Market, Favorites, Payments) correctly redirects an unauthenticated visitor to the login page, on all three locales.

20. Favorites-count API (logged out)

X EN X ES X DE

Loading any public page while logged out triggers a client-side error — see [D-01](#).

3. Findings

Usability/UX observations that aren't necessarily wrong, just worth attention — kept separate from Defects below.

Trial-countdown wording shows "paid X min" / "pagado X min" / "bezahlt X min" for what is a free trial — potentially confusing phrasing.

Last confirmed: 2026-07-15

Form validation (required fields, email format) uses the browser's built-in messages, which aren't locale-aware.

Last confirmed: 2026-07-15

Proceeding to the Stripe-hosted payment step leaves the site's visual context entirely and renders in English regardless of the site's active locale.

Last confirmed: 2026-07-12

Only card payment via Stripe is currently available; PayPal and Bank Transfer are both marked "Coming soon."

Last confirmed: 2026-07-15

Minor accessibility gaps: the password field is missing an `autocomplete` attribute; three fields on the offers filter panel have no associated label.

Last confirmed: 2026-07-12

Nav bar content differs between the home page (reduced) and inner pages (full set of links) — likely intentional, worth a design-consistency review.

Last confirmed: 2026-07-12

Login errors reload the page rather than validating inline via AJAX, creating a small perceptible delay.

Last confirmed: 2026-07-12

The "Invalid credentials." login error text isn't marked with an ARIA `alert` role, so it may not be reliably announced by screen readers.

Last confirmed: 2026-07-15

When an unauthenticated visitor is redirected to login from a locale-scoped page, the locale is dropped — currently invisible only because the login form is itself English-only ([D-02](#)); it will become independently visible once that's fixed.

Last confirmed: 2026-07-15

Translation grammar/wording was spot-checked but not linguistically reviewed by a native speaker — this report covers presence/absence and formatting correctness of translations, not their linguistic quality.

4. Defects

ID	TITLE	SEVERITY	PRIORITY	LAST CONFIRMED
D-01	Favorites-count API throws a client-side error for unauthenticated users	Medium	Medium	2026-07-15
D-02	Login and Registration forms are entirely in English regardless of locale	High	High	2026-07-15
D-03	German home page has extensive untranslated Spanish content	High	High	2026-07-15
D-04	Logo image alt text is permanently in Spanish	Low	Low	2026-07-15
D-05	Footer copyright text is permanently in Spanish	Low	Low	2026-07-15
D-06	Feature-section image alt texts are permanently in Spanish	Low	Low	2026-07-15
D-07	Payments page date format isn't localized on German	Low	Low	2026-07-15
D-08	Payments page decimal separator isn't localized on Spanish	Low	Low	2026-07-15
D-09	Payments page price-unit suffixes stay in Spanish on English and German	Low-Medium	Medium	2026-07-15

D-10	Below-Market page isn't localized on English or German	Medium	Medium	2026-07-15
D-11	Analytics page triggers repeated console resource-load errors	Low	Low	2026-07-15
D-12	Terms of Service requires authentication	High	High	2026-07-15
D-13	Favorites badge count doesn't update live after removing a favorite	Low	Low	2026-07-15
D-14	Payment-method selection shows a Spanish plan label on the English payments page	Low	Low	2026-07-15

D-01 — Favorites-Count API Throws a Client-Side Error for Unauthenticated Users

Severity: Medium

Priority: Medium

Last confirmed: 2026-07-15

Environment	All public pages, all locales, unauthenticated
Steps	Load any page in a logged-out session, open the browser console
Expected	The favorites-count endpoint returns valid data, or the client skips the call while unauthenticated
Actual	The endpoint returns an HTML login-redirect page instead of JSON; the client attempts to parse it as JSON and throws a syntax error.

D-02 — Login and Registration Forms Are Entirely in English Regardless of Locale

Severity: High

Priority: High

Last confirmed: 2026-07-15

Environment	/login , /register , Spanish and German locales
Steps	Navigate to either form under the Spanish or German locale; observe the heading, labels, button, and links
Expected	Form content matches the locale, consistent with the correctly-localized nav bar
Actual	The nav bar reads correctly, but the form itself always shows English text — heading, labels, button, and links.

D-03 — German Home Page Has Extensive Untranslated Spanish Content

Severity: High

Priority: High

Last confirmed: 2026-07-15

Environment	Home page, German locale
Steps	Load the German home page; read the audience cards, calculator breakdown, and success-stories section
Expected	All visible text in German
Actual	The audience cards, calculator breakdown, and success-stories section all remain in Spanish.

D-04 — Logo Image Alt Text Is Permanently in Spanish

Severity: Low

Priority: Low

Last confirmed: 2026-07-15

Environment	All pages, all locales
Actual	The logo's alt text always reads the same Spanish string regardless of the active locale.

D-05 — Footer Copyright Text Is Permanently in Spanish

Severity: Low

Priority: Low

Last confirmed: 2026-07-15

Environment	All pages, English and German locales
Actual	The footer copyright line stays in Spanish on both English and German.

D-06 — Feature-Section Image Alt Texts Are Permanently in Spanish

Severity: Low

Priority: Low

Last confirmed: 2026-07-15

Environment	Home page, English and German locales
Actual	The six feature-section images' alt text stays in Spanish on both English and German (e.g. "Panel de Ofertas", "Análítica de Beneficios").

D-07 — Payments Page Date Format Isn't Localized on German

Severity: Low

Priority: Low

Last confirmed: 2026-07-15

Environment	/pagos , German locale, authenticated
Expected	Expiry date renders as DD.MM.YYYY (German convention)
Actual	Renders as DD/MM/YYYY — the same slash format used on Spanish and English.

D-08 — Payments Page Decimal Separator Isn't Localized on Spanish

Severity: Low

Priority: Low

Last confirmed: 2026-07-15

Environment	/pagos , Spanish locale, authenticated
Expected	Prices render with a comma decimal separator (e.g. "€2,99")
Actual	Prices render with a period ("€2.99", "€11.99", "€99.99").

D-09 — Payments Page Price-Unit Suffixes Stay in Spanish on English and German

Severity: Low-Medium

Priority: Medium

Last confirmed: 2026-07-15

Environment	/pagos , English and German locales, authenticated
Expected	Suffixes match the locale (EN: "/day"; DE: "/Tag"), matching the correctly-localized plan names
Actual	Plan names localize correctly, but the unit suffix next to each price stays Spanish on both locales ("/día", "/mes", "/año").

D-10 — Below-Market Page Isn't Localized on English or German

Severity: Medium

Priority: Medium

Last confirmed: 2026-07-15

Environment	/below-market , authenticated, English and German locales
Steps	Log in, navigate to Below-Market with English or German selected
Expected	Page title, heading, and all labels render in the active locale
Actual	Page title, heading, and all labels are in Spanish on both English and German.

D-11 — Analytics Page Triggers Repeated Console Resource-Load Errors

Severity: Low

Priority: Low

Last confirmed: 2026-07-15

Environment	/stats/profit , authenticated
Steps	Log in, open Analytics, open the browser console
Expected	No repeated resource-load failures
Actual	12-13 "Failed to load resource" errors log within seconds of page load, consistent with references to offers whose availability changes over time.

D-12 — Terms of Service Requires Authentication

Severity: High

Priority: High

Last confirmed: 2026-07-15

Environment	/terms-of-service , all locales
-------------	---------------------------------

Steps	In a logged-out session, navigate directly to the page, or click its link in the public home page footer
Expected	The page renders publicly — this is a legal/compliance page, not a product feature
Actual	Both paths redirect to the login page, on all three locales. Renders correctly once authenticated.

D-13 — Favorites Badge Count Doesn't Update Live After Removing a Favorite

Severity: Low Priority: Low Last confirmed: 2026-07-15

Environment	<code>/favorites</code> , authenticated
Steps	Remove a favorite, confirm the dialog, observe the nav badge without reloading
Expected	The badge reflects the new count immediately
Actual	The badge stays at the pre-removal count for several seconds; a full reload shows the correct count. The removal itself is saved correctly — only the live display is stale.

D-14 — Payment-Method Selection Shows a Spanish Plan Label on the English Payments Page

Severity: Low Priority: Low Last confirmed: 2026-07-15

Environment	<code>/pagos</code> , English locale, authenticated
Steps	Open Payments with English selected, click "Select Plan" on any plan card
Expected	The payment-method step shows the plan name in English, matching the plan card it was selected from
Actual	The payment-method step reads "Selected Plan: Diario - €2.99/día" — the Spanish plan name and suffix, even though the plan card itself correctly read "Daily."

5. Test-Artifact Traceability Index

Full test case text, technique, preconditions, steps, and expected/actual results live in `i18n_test_cases_2026-07-12.md` and `test_cases_2026-07-15.md` . This index maps each feature area to its condition and case IDs only.

Payment-method plan-label localization (D-14)	—	Not yet formalized

6. Regression Impact

Most defects sit in shared, site-wide components — translation resolution, the shared auth-form component, the shared payments-formatting utility, the shared branding partial — rather than isolated pages, so fixes should be added to the permanent regression suite rather than treated as one-offs. The auth-form and branding-partial fixes touch code paths rendered on every page load across all locales; the payments-formatting fix touches a shared currency/date utility worth checking for other call sites (invoices, plan comparisons) beyond the pages tested here.

Four areas are newly covered by this report and should be added to the regression suite once addressed: the Below-Market localization gap ([D-10](#)), the Analytics page's resource-loading behavior ([D-11](#)), the Favorites-badge live-update gap ([D-13](#)), and — highest priority, given it's a compliance-relevant public page — Terms of Service route protection ([D-12](#)). [D-14](#) (payment-method plan-label localization) is newly discovered and does not yet have a formalized test case.
